

Development Artifacts

## SOFTWARE DESIGN - REQUIREMENTS TO RELEASE: 2825344

This course brings together important concepts, tools, techniques, and best practices in a hands-on software development project. Learners will iteratively develop requirements, design, code, and test to release several versions of a product, thereby experiencing a small-scale software development life cycle.

## Introduction

This document summarizes the guiding vision of the Red30 project. The following sections provide an overview of the product, its stakeholders, its key features, and other requirements that form the foundation for the project going forward.

### 01. Background

[H+ Sport](#) and Red30 Tech are fictitious companies created by [LinkedIn Corporation](#), or its affiliates, solely for the creation and development of educational training materials. Any resemblance to real products or services is purely coincidental. Information provided about the products or services is also fictitious and should not be construed as representative of actual products or services on the market in a similar product or service category.

### 02. Case Study

This case study involves two fictitious companies: H+ Sport and Red30 Tech. Red30 Tech is a software development firm that is going to build a software for H+ Sport, a company that offers health-related products and services. One of H+ Sport's services offers diet consulting to its customers through a panel of professional health coaches.

H+ Sport customers can register for this service and become H+ members. H+ then connects each member to a coach who then becomes the member's diet consultant. All members need to maintain a daily diet log in a paper notebook and their coaches then look at members' diet logs to make recommendations, as needed. However, the coaches often feel constrained by paper-based diet logs as they are hard to analyze and to find nutritional trends in the data. Also, members often log incomplete data, and whatever data they do log lacks any information about the nutrients and ingredients in their food items.

To this purpose, H+ Sport has partnered with Red30 to build an application for members and coaches to track their diets and perform useful analysis.

## Sprint 1 - Project Kickoff

### 03. Problem and Vision Statements

#### Problem statement

|                                       |   |
|---------------------------------------|---|
| <i>The problem of</i>                 | <i>paper-based diet logs</i>  |
| <i>affects</i>                        | <i>the quality of diet recommendations made by coaches</i>  |
| <i>the impact of which is</i>         | <i>that the coaches are not able to analyze diet logs and the members do not get the expected value</i>   |
| <i>a successful solution would be</i> | <i>a software application that makes it</i> <ul style="list-style-type: none"> <li><i>Easy for members to log their diets</i></li> <li><i>Insightful for coaches to analyze their members' diet logs</i></li> </ul> |

#### Product position statement

|                          |  |
|--------------------------|--|
| <i>For</i>               | <i>H+ Sport members</i>  |
| <i>Who</i>               | <i>want to track their diet and get good diet recommendations from their coaches</i> |
| <i>The product Red30</i> | <i>is a diet-tracking application</i>  |
| <i>That</i>              | <i>offers intuitive and insightful features about nutrition</i>                      |
| <i>Unlike</i>            | <i>other diet-tracking platforms or products</i>                                     |
| <i>Our product</i>       | <i>offers complete control over member data to H+ Sport</i>                          |

|                       |                                 |
|-----------------------|---------------------------------|
| Red30                 | Sprint 1 - Project Kickoff      |
| Development Artifacts | Elicit and Specify Requirements |

## 04. Elicit and Specify Requirements

### Stakeholder descriptions

Table 1: Stakeholder summary

| <i>Name</i>               | <i>Description</i>   | <i>Product responsibilities</i>   | <i>Project responsibilities</i>   |
|---------------------------|--|---|---|
| <i>H+ Sport members</i>   | <i>Registered customers for diet-consulting service</i>  | <i>Maintain a daily log of all the food they consume.<br/>Share diet log with their coaches every time they meet with them.</i>   | <i>If part of selected user group, provide inputs through interviews, surveys, and feedback on beta releases of the product.</i>                      |
| <i>H+ Sport coaches</i>   | <i>Health and fitness professionals registered as professional health and fitness coaches with H+ Sport to offer their consulting services</i> | <i>Track and analyze their customers' diet log.<br/>Offer diet recommendations according to members' health profile.<br/>Ensure that members' data privacy needs are met.</i>   | <i>Provide inputs through interviews, meetings, product reviews, and feedback on beta releases of the product.</i>                                    |
| <i>Red30 project team</i> | <i>Employees of Red30 Tech working on the project</i>  | <i>Make the product design flexible and adaptable for future needs.<br/>Make the product design scalable to accommodate more coaches and members in future.<br/>Make the product user interface intuitive for quick product adoption.</i> | <i>Deliver the software as per the requirements communicated by H+ Sport.<br/>Keep H+ Sport stakeholders informed on project progress, as needed.</i> |
| <i>Project sponsors</i>   | <i>Founder and CEO of H+ Sport; founder and CEO of Red30 Tech</i>  | <i>Provide long-term vision and goals to identify product requirements.<br/>Help the team prioritize product features to align with short- and long-term goals.</i>   | <i>Participate in key project review meetings and provide feedback and guidance.</i>  |

|                       |                                 |

## Sprint 2 - Beta

### 01. Prepare Sprint Backlog

User story - Search food products

As a user, I want to search for a food product by name so that I can see its nutritional value.

Use case - Search food products

**Primary actor:** User

**Secondary actor:** None

**Description:** In this use case, a user can search food products using some keywords.

**Precondition:** User should have access to the web application at the application URL.

#### Basic flow

1. User chooses the option to search for a product.
2. Red30 provides option to enter search keywords.
3. User enters the keywords.
4. Red30 displays the list of products with those keywords in their names and the list of nutrients and their quantities in them.
5. Use case ends successfully.

#### Alternate flow

From step 4 of basic flow:

1. Red30 does not find any matching products with the given keywords.
2. Red30 displays a message that no matching products are found.
3. Use case ends unsuccessfully.

**Postcondition:** Search results are displayed.

|                       |                        |

### 01. Prepare Sprint Backlog

User stories

*User story: Record meal*

As a registered user, I want to record my meals so that I can maintain my daily diet log.

*User story: View diet log*

As a registered user, I want to view my diet log so that I can keep track of what I am eating.

*User story: Login*

As a registered user, I want to log in to Red30 system so that I can use special features for registered users.

Use cases

*Use case: Record meal*

**Primary actor:** Registered user

**Secondary actor:** None

**Description:** In this use case, a registered user can record their meals.

**Precondition:** The registered user should be logged in.

**Basic flow**

1. Registered user chooses the option to record a meal.
2. Red30 provides options to enter meal data – meal date, time, and meal type (breakfast, lunch, dinner, or snack).
3. Registered user enters the required inputs.
4. Registered user searches for food product served in the meal by entering a search string.
5. Once found, registered user selects and enters quantity of serving and adds to the meal.
6. If more products were served, registered user goes back to step 4, unless they save the meal.
7. Red30 confirms that the meal has been saved.
8. Use case ends successfully.

**Alternate flow**

From step 3 of basic flow:

1. Registered user tries to save the meal without entering meal date or time.

|                       |                        |
|-----------------------|------------------------|
| Red30                 | Sprint 3 - Release 1.0 |
| Development Artifacts | Prepare Sprint Backlog |

2. Red30 displays a message that date and time must be entered.
3. Use case goes back to step 2.

**Postcondition:** Status of meal as saved or cancelled is displayed.

*Use case: View diet log*

**Primary actor:** Registered user

**Secondary actor:** None

**Description:** In this use case, a registered user can view their diet log.

**Precondition:** The registered user should be logged in.

**Basic flow**

1. Registered user chooses the option to view diet log.
2. Red30 displays the list of meals entered so far starting with most recent.
3. Red30 gives options to filter the list for a given date range.
4. Registered user enters the required inputs.
5. Red30 filters the list for a given date range.
6. Use case ends successfully.

**Postcondition:** Diet log is displayed.

*Use case: Login*

**Primary actor:** Registered user

**Secondary actor:** None

**Description:** In this use case, a registered user can log in to Red30 system.

**Precondition:** The registered user should have access to Red30 on the web.

**Basic flow**

1. Registered user chooses the option to log in.
2. Red30 displays the options to enter username and password.
3. Registered user enters username and password.
4. Red30 checks the username and password, and if correct, shows new features for registered users.
5. Use case ends successfully.

**Alternate flow**

1. From step 4 above, if the username and/or password are incorrect, Red30 displays a message and asks user to try logging in again.

**Postcondition:** Special features are available for use.
